

## PRODUCTION CONTROLLER

Fully define your production process entirely in the factory at your desk with this tailor-made solution.

The solution seamlessly links 'design' with your production line.

### Key Features

- ▼ **Manage the workload**  
per production line and track the efficiency for every deliverable job on the production line. This allows you to detect bottlenecks and improve your processes
- ▼ **Easily prioritise urgent projects**  
(simply with a mouse click) by rearranging the distribution of batches over the production lines
- ▼ By presenting a filtered digital just-in-time production file, **the production team can ensure a quality-assured file** relevant only for their workstation
- ▼ By zooming, searching, measuring, etc., **teams can easily examine, query and fulfil the given task.** This increases their output and creates an efficient paperless work environment
- ▼ The solution provides direct **feedback from your factory**, so operations can be analysed, improved and backed up with statistics
- ▼ **Every solution can be tailor-made** for your manufacturing processes and needs

### End Result

The data (or a selection of it) that you develop with hsbcad PRODUCTION CONTROLLER can be exported to:

- Quality assured feedback to operations manager
